Sample printout from a standard Microsoft Windows® printer

The Verifier Computer Interface is the alternative to thermal printers from Auto ID Solutions

We listened to our customers and the result was this product. It is a more economical alternative to thermal printers for both RJS and HHP bar code verifiers and a way to electronically save quality reports.

Using the built-in printing functionality of hand-held bar code verifiers, this product transfers the quality report to the proprietary Auto ID Solutions Windows software application. A time and date stamp is immediately applied to track product quality over time. The report can be saved to a local or network location and later retrieved to reprint reports. Reports may be printed to any standard Windows printer.

Product includes:

- Installation CD
- Interface cable
- Software Key
- USB adapter (optional)

System requirements:

- Microsoft Windows® 95, 2000, or XP
- Pentium 200Mhz
- 32 Meg of RAM
- 2 Meg of Hard drive space
- Parallel port (printer may still be used)
- Serial or USB port

This equipment and its documentation were developed to fit into your company's existing ISO 9000/9001/9002 policies and procedures.
